## **Volley Multipurpose Chair**

The Volley Multipurpose Chair. Comfortable. Dependable. Simple.

- The vast depth and breadth of the Volley Series ranges from medium density wire rod stackers to multipurpose mobile guest chairs to practical + functional task chairs.
- From meeting, training and conference rooms, to break, dorm and classrooms, not to mention labs, reception halls and waiting rooms, the Volley Series has a wide variety of models-and a wider variety of options-to specify any space.
- Specify one of 15 custom designed plastic colors or add an upholstered seat or upholstered seat-and-back combination for added long-term comfort.
- The Volley Series chair seat and back are designed for comfort, whether you're sitting for minutes or hours. The convex curve of the back is positioned to provide healthy support + stability, while the flexing mechanism generates motion with 14 degrees of flex allowing the user to position the back angle for enhanced comfort and long-term sitting. The back curves support the 5th to 95th percentile of the population.
- The flexing mechanism is made of a dependable heavy-duty rubber composite that holds its tension and doesn't wear out over time. Both our wire rod and tubular frame meet and exceed ansi-bifma standards designed for strength and long-term durability. The wire rod consists of 1/2-inch diameter steel and our tube frame utilizes 12-gauge steel with a diameter of 1 1/7 inch. Our concealed dual stretcher bar construction eliminates the need for a stretcher bar allowing more legroom.
